

I think that this petition to change the licensing structure of amateur radio is a good idea. It would allow me to use the HF bands (which I am very interested in). The only thing holding me back from using the HF bands is the morse code requirement, which I find very difficult. I have tried to learn it, but find it very difficult. I think it would be a good idea to pass it because it would allow the amateur radio hobby to grow and flourish. Thank you for letting me comment. I hope this petition passes so I can enjoy making contacts on the HF band.
